- Rest APIs

Database:

- MongoDB

PROJECTS

1. **To-Do List Application :**

A responsive To-Do application developed to manage daily tasks efficiently, featuring task creation, editing, deletion, and completion tracking. Implemented clean UI with component-based architecture and effective state management to ensure smooth performance and improved user experience. This project highlights practical frontend development skills and clean coding practices.

2. **Personal portfolio website:**

A personal portfolio website developed to showcase projects, technical skills, and experience in a clean and responsive layout. Designed with a user-centric approach, the website highlights frontend development capabilities, includes project demonstrations, and provides an easy way for recruiters to connect through a contact section. This project reflects strong UI design sense, responsive design principles, and modern frontend development practices**.**

3. **Grocery delivery app:**

A Grocery Delivery App is a digital platform that allows users to order daily grocery items such as fruits, vegetables, dairy products, and household essentials online and get them delivered to their doorstep, providing a convenient, time-saving, and user-friendly shopping experience. Users can browse products by categories, add items to the cart, place orders, choose flexible delivery options, and make secure online payments while tracking their orders in real time. For administrators, the system includes features like product management, order management, and inventory control, making the app efficient and reliable while reducing the need for physical store visits.
